

Ask the user to enter the names of three items and their prices, and the tax rate as a decimal. After they enter this information calculate the subtotal, tax, and total, and print out a receipt as formatted below. The item names may contain multiple words (assume they will not be longer than 20 characters each). The line of stars is 30 characters long.

As a major portion of this lab is practicing formatting, your goal is to make your receipt look exactly like the one below.

Apple	\$	1.29
Egg Salad Sandwich	\$	2.79
Pie	\$	5.99

Subtotal	\$	10.07
Tax	\$	0.81
Total	\$	10.88
